Project feedback

This is an activity involving two groups of students, Group A and Group B.

3 min Please review the below questions at the beginning of the activity. Group A will have to answer the questions below for Group B, and Group B will have to answer the same questions for Group A. Therefore, make sure that you get the answers you need when the other group presents.

5 min Group A explains their project.
5 min Group B asks questions about the project, gives feedback about what they like about the project and makes suggestions for how to further develop the project.

5 min Group B explains their project.
5 min Group A asks questions about the project, gives feedback about what they like about the project and makes suggestions for how to further develop the project.

7 min All students in Group A work together to fill in the feedback questions for Group B, and all students in Group B work together to fill in the feedback questions for Group A.

At the end of the session, please upload a copy or picture of your filled in feedback sheet to Canvas. Also, please share the filled in sheet with the other group.

Feedback questions

1. What is the project about?

   This group's project is about Pokemon cards, a fantasy trading card game with a unique set of rules that include spending energy to execute moves and obtain cards.

2. What are the decision variables? What is the objective? Mention some important constraints.

   The decision variable is a binary variable xi for each card i where xi = 1 if the card is selected and xi=0 if the card is not selected. The objective is to maximize effectiveness, which is a metric based on various statistical properties of each card. Some important constraints are the deck needing to include exactly 60 cards, a budget constraint restricting the total cost in obtaining all cards,

3. Does the group have a clear idea of where to gather the input data they need for their project? Where will it come from?

4. Mention three things you like about the project.

5. Make three suggestions for how to extend/improve/further develop the project
